What is CGRP?

Carrie Dougherty MD
Associate Professor Neurology
MedStar Georgetown Headache Center
Disclosures

Research (no personal compensation): electroCore, Eli Lilly, Allergan, Amgen

Speaking honorarium: Amgen, Biohaven, electroCore, Eli Lilly, Novartis, Lundbeck, Teva

Consulting: Allergan, Biohaven, Clearview Health Partners, Guidepoint Consulting, GLG, Lundbeck, Magellan Rx Management, Novartis, Supernus and Theranica.
Outline

- CGRP
- Role in migraine
- How medications act on CGRP
- Q&A (definitely Q, maybe some A)
CGRP: Calcitonin Gene Related Peptide

- Neuropeptides: signaling molecules in the brain
- CGRP involved in regulating blood flow in the brain
- Acts to relax blood vessels
CGRP in Migraine

• CGRP levels increase during acute migraine
• Triptans reduce CGRP levels during acute migraine
  • Decrease corresponds with migraine relief
• CGRP increased between migraines in persons with CM
• Degree of CGRP elevation predicts positive response to onabotA

Cernuda-Morollón et al. Neurology 2013, 81 (14) 1191-1196
How do the meds work?

**Triptans** act on serotonin receptors 5HT1b/d

**Ditans** act on serotonin receptor 5HT1f

**Gepants** are small molecules that bind to and block the CGRP receptor, without causing any vasoconstrictive effects

**Anti-CGRP monoclonal antibodies** bind the CGRP receptor or CGRP itself

**Onabotulinum** toxin binds to docking proteins and inhibits vesicle release.

---

CGRP-R, calcitonin gene-related peptide-receptor; 5-HT, 5-hydroxytryptamine; mAb, monoclonal antibody.

Q&A

• Can I just get my CGRP levels tested?
  • Oh, if it were only that easy
  • Half life is 7 minutes
  • No commercially available test

• What else does CGRP do in the body?
Q&A

• Side effects
  • How are side effects determined?
    • On label
    • Postmarketing report
  • What if I have a side effect that’s not listed?
    • Tell your doctor.
    • Report negative side effects of prescription drugs to the FDA [www.fda.gov/medwatch](http://www.fda.gov/medwatch) or call 1-800-FDA-1088.
Q&A

• If I’ve tried one CGRP antibody, should I consider trying another?
  • Lack of benefit? Yes, the medications are different
  • Side effects? Maybe

• Why don’t these medications help me?
  • Clinical trials often represent an “idealized” patient population
  • Migraine is complicated, CGRP is not the whole story.
The future in bright!
